PROFESSIONAL SUMMARY

Software Engineer and Full-Stack Developer with over 2 years of hands-on experience building scalable web applications, backend services, educational technology solutions, and data-driven systems. Experienced in designing and developing modern applications using JavaScript, Python, Django, MongoDB, Express.js, React, and REST APIs.

Proven ability to transform ideas into functional products, from requirement gathering and system design to deployment and maintenance. Built educational platforms, e-commerce solutions, dashboard applications, CBT systems, document intelligence tools, and AI-powered learning platforms. Strong understanding of database design, backend architecture, API development, authentication systems, and cloud deployment.

Passionate about solving real-world problems through technology, with experience leading technical projects, collaborating in hackathons, creating technical content, and organizing developer community events. Adept at learning new technologies quickly and delivering user-focused solutions in fast-paced environments.

TECHNICAL SKILLS

Backend: Node.js, Express.js, Database Design, Firebase, MySQL, MongoDB, Django, Python, Java

Frontend: React.js, Tailwind CSS

Tools: Git & GitHub, Vite, Agile

WORK EXPERIENCE

Luxa (luxa.ng)

Software Engineer (Full-Stack) | December 2025 – Present

Tech Stack: Python, Django, JavaScript, HTML5, CSS3, SQLite, PostgreSQL, Git

As a Full-Stack Software Engineer at Luxa, I contribute to the development and continuous improvement of a production e-commerce platform, building customer-facing features and backend functionality that enhance the shopping experience and platform performance.

- Developed and launched a fully responsive **About Us** page, implementing modern UI/UX principles and ensuring cross-device compatibility.
- Designed and implemented a comprehensive **Product Review System**, enabling authenticated customers to submit, edit, and manage product reviews while integrating review functionality with Django models, views, templates, and database relationships.
- Led the **Category Revamp** initiative by restructuring product categories and improving both frontend navigation and backend data handling, making product discovery faster and more intuitive.
- Built dynamic **category filtering** functionality across the frontend and backend to improve product browsing and search efficiency.
- Developed responsive landing pages and reusable UI components that strengthened the platform's visual consistency and user experience.
- Implemented backend business logic for product organization, retrieval, and category management using Django's ORM and class/function-based views.

- Worked extensively with Django models, template rendering, forms, authentication, and relational database operations using SQLite and PostgreSQL.
- Collaborated with the engineering team to deliver new features, troubleshoot production issues, perform debugging, and resolve application bugs.
- Improved application maintainability by writing clean, modular, and reusable code following Django best practices.
- Participated in feature planning, implementation, testing, and deployment while contributing to continuous platform enhancements.
- Used Git for version control, code collaboration, and feature integration throughout the software development lifecycle.

Athena (EdTech Startup)

Backend Engineer | May 2025 - Present (Part-time)

Tech Stack: Node.js, Express.js, MongoDB, JavaScript, REST APIs, JWT, Git, OpenAI API

Athena is an AI-powered educational platform designed to help students learn more effectively through intelligent study tools, automated assessments, and personalized learning experiences. As a Backend Engineer, I develop and maintain core backend services that power authentication, assessments, and AI-driven learning features.

Key Contributions

- Designed and implemented a secure authentication and authorization system using JWT, supporting user registration, login, protected routes, and session management.
- Developed the backend architecture for the platform's **Quiz and Test MVP**, enabling students to take structured assessments and receive automated scoring.
- Built RESTful APIs for authentication, quiz management, and user interactions.
- Designed MongoDB database schemas for users, quizzes, questions, test attempts, and learning progress.
- Implemented backend business logic for quiz generation, answer validation, score calculation, and progress tracking.
- Integrated AI-powered assessment workflows to support intelligent learning experiences and future automated question generation.
- Collaborated with the product team to define backend requirements and deliver MVP features aligned with user needs.
- Wrote modular, maintainable, and scalable Express.js code following backend engineering best practices.
- Participated in feature planning, debugging, testing, and continuous improvement of the platform as it evolved from concept to MVP.
- Continue to contribute to the platform on a part-time basis by maintaining existing services and developing new backend features.

EDUCATION

Bachelor of Science in Computer Science – Landmark University, Nigeria
